PREFACE

This listing of Federal and private nuclear facilities in the United States has been compiled from a large number of sources of information, and is correct as of January 31, 1966. The principal sources used for the compilation follow:

1. Nuclear Reactors Built, Being Built, or Planned in the United States. Prepared semi-annually by Division of Reactor Development, U. S. Atomic Energy Commission and issued by the Division of Technical Information.
2. Major Activities in the Atomic Energy Programs. Issued annually by the U. S. Atomic Energy Commission.
3. Atomic Energy Clearing House. Issued weekly by the Congressional Information Bureau, Inc., 14th and G Streets, N.W., Washington, D. C.
4. The Atomic Energy Deskbook. John F. Hogerton, Reinhold Publishing Corp., New York (1963).
5. The Nuclear Industry - 1964. Issued periodically by Division of Industrial Participation, U. S. Atomic Energy Commission.

In this compilation every effort has been made to make it as correct and current as possible. However, it is realized that some errors probably exist in the document. For example, in some cases listings include corporate addresses that are the location of the headquarters or central office of the licensee and may not necessarily be the facility location.

The list primarily includes facilities at which liquid, solid, and/or airborne wastes may be generated. These wastes may be either chemical or radioactive or both. The following categories of facilities are included in the list:

1. Nuclear Power Reactors
2. Research Reactors
3. Military Reactors
4. Production Reactors
5. Critical Assembly Facilities
6. Fuel Element Fabrication Plants
7. Fuel Reprocessing Plants
8. Uranium Processing Plants
9. Thorium Processing Plants
10. Encapsulating Facilities
11. Land Disposal Areas
12. Weapons Production Facilities
13. Uranium Enrichment Facilities
14. Gaseous Diffusion Plants
15. Scrap Recovery Plants
16. Plutonium Fabrication Plants

Certain types of nuclear facilities are omitted from this compilation. These facilities generally do not discharge significant quantities or large volumes of radioactive wastes and some do not have any liquid waste discharge.

To make the compilation completely inclusive would be a formidable task resulting in a bulky document and the usefulness of such a compilation would be greatly reduced.

The following types of facilities are omitted:

1. Mobile reactors such as the barge-mounted nuclear power plant MH-14.
2. Shipyards building nuclear-powered ships, both civilian and military.
3. Ports-of-call of nuclear-powered ships, both civilian and military.
4. Isotopic radiographic installations.
5. Radium-beryllium or plutonium-beryllium neutron sources.
6. Hospitals using radioisotopes, especially those that dispose of their own waste.
7. Radiochemical laboratories and radiopharmaceutical companies.
8. Radium users.
9. SNAP reactors and isotopic generators such as the Coast Guard buoy in Chesapeake Bay off Baltimore Harbor.
10. Naval nuclear propulsion vessels. As of June 30, 1964, there were 48 such vessels in operation and 41 being built.
11. Private decontamination laundry services.

Status descriptions are defined as follows:

Operable - The facility is presently in operation. In the case of federal government reactors, this is defined as the time when operating licenses have been granted by the U. S. Atomic Energy Commission.

Being Built - The facility is under active construction.

Planned - A public announcement has been made regarding the proposed construction of the facility.

Shut Down - The facility operation has been terminated, without definite plans for future start-up. In some cases a license for the facility is still in effect. In other cases the license is also terminated.

Licensed - Generally means the same as operable. However in a number of cases a license for facility operation is possessed but no operation is currently carried out. Certain facilities are listed as "Licensed (AS)." This means that the facility is licensed by the State under agreement with the U. S. Atomic Energy Commission.

Standby - Facility operation has been terminated, but plans for future operation exist.

Unlicensed - Generally means the physical plant, or capability, exists but an operating license is not possessed, and the plant is not operable.

U. S. Ports Cleared for Receipt of Irradiated Fuels*

Los Angeles, California
Redwood City, California
Port Everglades, Florida
Tampa, Florida
Savannah, Georgia
New Orleans, Louisiana
Portland, Maine
Searsport, Maine
Gulfport, Mississippi
Albany, New York
Buffalo, New York
New York, New York
Morehead City, North Carolina
Wilmington, North Carolina
Portland, Oregon
Philadelphia, Pennsylvania
Charleston, South Carolina
Corpus Christi, Texas
Houston, Texas
Norfolk, Virginia
Seattle, Washington

Clearance involves filing a joint resolution approving acceptance of irradiated fuels by port authority and community officials with the U. S. Coast Guard and Atomic Energy Commission.

* The Nuclear Industry - 1964. Division of Industrial Participation, U. S. Atomic Energy Commission.

Agreement States
(As of 1/31/66)

The following States have entered into an agreement with the U. S. Atomic Energy Commission under provisions of Public Law 86-373 whereby certain regulatory authority is assumed for the control of byproduct material, source material, and special nuclear material in quantities not sufficient to form a critical mass. Under this agreement the States rather than the U. S. Atomic Energy Commission will issue licenses for the use of these materials.

Arkansas
California
Florida
Kansas
Kentucky
Mississippi
New York
North Carolina
Oregon
Texas
Tennessee
